

BTEC Health and Social Care

Scan for Specification

Our two-year BTEC covers a broad range of theories and concepts, starting with human lifespan development and ending with physiological disorders and their care. You will consider the roles and responsibilities of various care workers and settings, considering how professionals can support people across the life stages.

LITERACY TASK

BEFORE YOU START

- Key textbook to purchase: **BTEC National Health and Social Care Student Book 1 (2016) ISBN:9781292126012**

An essential component of this course is knowing and understanding the 6 Cs of care.

Research the 6 Cs of care:

- Care
- Compassion
- Commitment
- Courage
- Communication
- Competence

Define what is meant by each C in the context of health and note down why it is an essential skill.

Over the past decade there have been a number of scandals across the NHS that focus on poor care and patient harm. Part of the role of people who work in healthcare is to ensure that any poor practices are reported, so that it can be tackled and prevented.

A current and ongoing case of poor care is the case of Lucy Letby (Trigger warning: The following documentary talks about harm to infants (babies) and the processes that enabled Lucy to be able to kill babies on a neonatal unit). Watch the following documentary:

[BBC iPlayer - Panorama - Lucy Letby: The Nurse Who Killed](#) (58 mins)

Whilst you are watching, write down at least 3 ways that the hospital and the staff could have prevented the harm Lucy caused to young infants.

Do some further research into the more recent charges that have been brought against Lucy Letby – include the number of babies she has now been charged with harming/killing.

LUCY LETBY
THE NURSE WHO KILLED

Research skills are an essential part of the health and social care course. As part of the second unit, you will learn about equality and diversity, and how health and social care professionals work together as part of a multi-disciplinary team.

In the first unit of study, you will focus on physical, intellectual, emotional and social changes that occur across the life stages. With this in mind, you will also study genetic factors that might affect development.

Complete research and write a short paragraph about EITHER Down's syndrome or cystic fibrosis.

You should include details about:

1. The specific genes associated with the disease.
2. The impact that the disease has on physical, intellectual, emotional and social development.
3. Any additional support a person with your disease might need at school or in the workplace.
4. Any medication a sufferer may need to take as a result of their disease.

Research and list 5 jobs that you could only undertake if you worked in the NHS.

Choose two from the list and outline the role and expectations in more detail.

Review those two to show why you would be interested in or suitable for that **career**.
